

septek[®] filter

filtration & separation technology

septek filter

Our roots stem from woolen and worsted spinning of wool fibre and synthetic man-made fibres in the late 1960s. Through the spinning process, valuable knowledge was obtained regarding fibre formation and yarn construction, and the interaction between fibre and yarn surfaces, solids/particles and liquids/gases. Further knowledge was acquired through study at Chalmers University of Technology, Gothenburg Sweden, in specific areas such as textile mechanics and polymeric materials. There followed work in the filtration industry during the late 1970s and 1980s, which yielded additional experience and expertise within filtration fabric technology and early development of e-PTFE

membrane filtration technology.

Separationsteknik AB was founded as a family company in 1990 to provide unique filtration fabric solutions for the Mining-, Paper & Pulp- and other process industries, mainly in the Nordic countries.

Since then, the company has not only expanded into new fields of filtration and separation, but also into new markets in other parts of the world.

Our goal at Separationsteknik AB is to be a small, flexible company with close, long-term customer relations. Our mission is to;

“Create Unrivalled Customer Value”

products/ production

We have had close cooperation for many years with a number of leading filtration companies in different fields and have supplied roll goods, semi-finished and finished products. Our core business product line is presented in a separate leaflet, see enclosed. Some of these products are manufactured in our own production plant, others by our subcontractors or by our finished goods suppliers. By actively involving our customers in choice of material, construction and design solutions, we aim to offer the best customer value for our products.

quality

We strive for good quality control in all our work and our goal is to keep faults near zero. In order to achieve this goal we continuously develop and implement improvements in all our activities.

environment

We follow all laws and regulations that apply to our business. We strive for all septek products to be produced as energy-efficiently and environmentally effectively as possible. We work toward continuous improvements for reducing our environmental impact and we revise our environmental policy continuously.

hard goods

Filterplates for filterpresses.

Replacement disc sectors for pressurized disc filters.

Replacement disc sectors for fiber recovery & pulp thickening.

Replacement perforated steeltubes.

Filterpresses.

www.septek.se

Filtercloths for filterpresses, all sizes customized.

Rubber feed neck and rim reinforcement.

Heavy duty press filter cloths.

Filterbags for fluegas filtration.
