

## **STIGEBRANDT Sector pump**

### **Sector pump**

And so we came to the conclusion that we needed a better pump. A few years later we not only had a new patent. We also had the pump we wanted.

The Stigebrandt Sector Pump is both a transport pump and a dosage pump that is also 100% reversible and thus work in both directions if need be. In both cases it delivers a contineous flow ideal to the mixing of liquids.

### **It's a better pump. End of story.**

The patented sector pump is made to handle liquids of high viscosity as polymers in concentrated liquid form and polymer solutions, and the flow is controlled by a frequency converter. But the pump also handles transport and dosage of industrial chemicals such as sodium hydroxide and even hydrochloric acid. In fact, the sector pump can handle any liquid you ask it to. In addition to this it is easy to disassemble and clean. 4 sizes are available and we construct every pump in the materials (case, motors etc) most appropriate for the specific task.
